T-PROFILES

The smart covering for expansion joints and transitions between various floor surfaces.

Ceramic tiles are unimaginable without joints. However, they often interfere with the appearance. The alfercap profiles are pressed into the still wet silicone bed and they deftly conceal the transitions between the floor surfaces. Available in many trendy colours and high quality materials, they are designer items. The profiles can also be added subsequently. An elegant solution for covering thicknesses from 6mm.

alfercap

T

Application T-profile

alfercap – This profile elegantly conceals transitions of adjoining floor coverings. For installation, the T-profiles are simply pushed into the fresh silicone.
