## SHOWER CHANNELS AND -PROFILES

---

**Shower channels made of stainless steel for the highest demands in design and reliability.**

Shower channels are the most elegant way of draining floor-level showers. Seven lengths and six design grates offer the right solution for every situation. Thanks to the hard foam body with drain, odour trap and horizontal outlet, the channel system is easy to position on the screed. A relining is not necessary. Drain and sealing form one unit and permanently protect against moisture. The total installation height is only 60 mm.

Apart from the shower channel, alferline has a lot more to offer: From the shower wall trim to the slope wedge and the glass profile, you will find everything you need to install the shower of your dreams.

## SHOWER CHANNELS AND -PROFILES

### alferline slim flex, the shower channel that can be flexibly cut to length

alferline slim flex is the shower channel that can be individually adapted. With an installation height of 60mm to 100mm and two initial lengths of 1000mm and 1200mm, it can be used variably for any project. The shower channel can be cut to length up to 320mm.

The channel is made of high-quality stainless steel, does not rust and can be cut to length with standard tools so that it fits exactly into the shower. This means there is no more tile waste or unsightly mitre cuts. The channel is suitable for tile thicknesses from 10mm to 25mm.

The alferline slim flex has a second drainage level and the drain body has an integrated sealing collar. The drainage channel thus follows the recommendations from the guide for drains and channels of the German Tile and Natural Stone Association. The drainage capacity is up to 1.0 l/s. We recommend our alferground range as a supplement (see pages 188 – 197).

**LOW INSTALLATION HEIGHT AND EXCELLENT DISCHARGE VALUES**

### Shower channel slim plus with EPS block and integrated sealing collar

alferline slim plus is a shower channel system for very low installation heights. With a total installation height of only 60mm, it is also suitable for refurbishments besides new buildings.

The EPS hard foam block makes positioning on the screed simple and no additional lining is required. With the two-piece substructure the installation height can freely vary from 60mm to 80mm.

A drain with odour trap is already integrated. The shower channel has a second drainage level. Depending on the installation height, the draining capacity is up to 1 l/s. The shower channel is suitable for tile thicknesses from 11 mm to 18 mm. An optimal connection with the composite seal is ensured by the sealing applied at the factory. In addition, we recommend the alferground range (see pages 188 – 197).

The shower channels and covers are made of high quality stainless steel. Tile trough and siphon are very easy to clean.
